RELATED COURSES

100 Days of Code, The Complete Web Development Bootcamp: Becoming a web developer is highly demanded. Therefore, this course turns me into a web developer in 100 days. This course covers: HTML, CSS, and JavaScript, node.js.

AWS Serverless APIs & Apps - A Complete Introduction: Since AWS is the future of web development, this course dives me into how to build serverless apps with Amazon Web Services (AWS). Thus, this course helps me: Build a REST API without worrying about servers, using AWS API Gateway, set up your on-demand code via AWS Lambda, store data in a database - naturally without managing any database servers.

Machine learning and Data Mining: This course provides a broad introduction to machine learning, data mining, and statistical pattern recognition. It gives a piece of background information on python and how to use it to so make the computer act without being explicitly programmed.

Projects

2019-2022

- Desktop Application - P.O.S System- complete sales transactions and accept credit card payments
- Friendly, UI/UX design E-commerce website
- Machine learning project: breast cancer prediction
- Image processing project for attendance: The teacher uploads an image. Thus, the system detects the absence.
- Marketing project to segment the target product in e-commerce seeking more information in promoting.
